

# AI Chat Proxy — Project Overview

**Project:** AI Chat Proxy  
**Technology:** JavaScript, Node.js, Express, OpenAI API  
**Location:** `/home/dominic/Documents/ai-chat-proxy`  
**Report #:** 1/20

## Overview

Minimal OpenAI API proxy server for chat completions.

## Purpose

Proxies OpenAI chat completion API with streaming support and custom domain.

## Status

Active development. See report 16 (Known Issues) and report 19 (Improvements).

## Key Features

• OpenAI chat proxy • Streaming responses • Custom domain mapping • Simple Express server

## Entry Points

`node server.js`

## Detailed Architecture

### Project Structure

`app/main.py` (FastAPI proxy + rate limiter), `frontend/index.html` (340-line self-contained chat UI)

### Technology Stack

| Layer             | Technology | Purpose         |
|-------------------|------------|-----------------|
| Backend Framework | FastAPI    | REST/API server |

| Layer      | Technology                | Purpose                        |
|------------|---------------------------|--------------------------------|
| Database   | SQLite                    | Data persistence               |
| Auth       | JWT                       | Authentication & authorization |
| Frontend   | None                      | User interface                 |
| Deployment | Render.com + GitHub Pages | Hosting & CI/CD                |

## Module Breakdown

See project structure above.

## Data Flow

1. Request enters via HTTP (REST, GraphQL, or WebSocket)
2. Authentication middleware validates JWT token (if required)
3. Router dispatches to appropriate handler
4. Handler processes business logic with database queries
5. Response formatted and returned to client
6. Frontend renders response in appropriate view

## Entry Points

- **Server:** `uvicorn app.main:app`
- **Port:** 8000 (default)
- **Health check:** `GET /health`

## Configuration

---

### Environment Variables

| Variable     | Description                | Default             |
|--------------|----------------------------|---------------------|
| DATABASE_URL | Database connection string | sqlite:///./data.db |
| SECRET_KEY   | JWT signing secret         | (required)          |
| CORS_ORIGINS | Allowed CORS origins       | *                   |
| DEBUG        | Debug mode flag            | false               |

## Deployment

---

### Requirements

- Python 3.10+
- pip dependencies (see requirements.txt)
- SQLite (or PostgreSQL for production)

## Startup Commands

```
# Development
uvicorn app.main:app --reload

# Production
uvicorn app.main:app --host 0.0.0.0 --port 8000
```
