

Portfolio Daemon — Tech Stack and Dependencies

Project: Portfolio Daemon
Technology: Python, asyncio, asyncssh, httpx, watchdog
Location: /home/dominic/Documents/portfolio-daemon
Report #: 5/20

Primary Stack

Python, asyncio, asyncssh, httpx, watchdog

Key Dependencies

- `asyncio` — async runtime
 - `asyncssh` — SSH tunnels
 - `httpx` — HTTP client
 - `watchdog` — file watching
 - `rich` — CLI output
 - `pyyaml` — config parsing
-

Technology Stack Details

Framework Versions

Component	Technology	Version	Purpose
Backend	Python	API server	
Database	SQLAlchemy + SQLite	Persistence	
Auth	JWT	Security	
Frontend	None	UI	
Hosting	Render.com + GitHub Pages	Deployment	

Core Dependencies

```
# Core dependencies
fastapi>=0.115.0
sqlalchemy>=2.0.0
```

```
pydantic>=2.0.0
uvicorn[standard]>=0.30.0
```

Dependency Justification

Package	Why	Alternative Considered
fastapi	Modern ASGI framework	Flask, Django
sqlalchemy	Mature ORM with async	peewee, tortoise-orm
pydantic	Validation + serialization	marshmallow
jose	JWT handling	PyJWT

Development Dependencies

Package	Purpose
pytest	Testing framework
httpx	Async HTTP client for tests
uvicorn	ASGI server
python-dotenv	Environment variable loading

External Services

Service	Purpose	Integration Point
OpenAI	AI chat completion	/v1/chat/completions proxy
GitHub Pages	Static hosting	git push deployment

Version Constraints

- Python 3.10+ required (type hints, pattern matching)
- Pydantic v2 for improved validation performance
- SQLAlchemy 2.0+ for modern async support
